Mission

The PhD in Health Data Science trains the next generation of data science leaders for applications in public health and medicine. Students in the program develop innovative statistical and computational methods for data analysis and for deriving new scientific discoveries in the public health and biomedical sciences. The program takes advantage of the rich biostatistical and bioinformatics resources at GWU and in the Nation's Capital and is designed to prepare students to be independent researchers in the development of methodologies, and effective collaborators in interdisciplinary studies.

Competencies

Biostatistics Concentration Competencies

- 1. <u>Biostatistical Methodology</u>: Develop and implement innovative biostatistical methodologies that can be utilized to solve complex problems in and improve efficiency of biomedical and public health research.
- 2. <u>Advanced Statistics & Computation</u>: Implement fundamental and advanced statistical methods and associated computing to effectively and accurately analyze complex public health and medical data.
- **3.** <u>Communication</u>: Communicate and collaborate with scientific colleagues such as public health, medical professionals, and research scientists via effective listening, critical questioning, clear written documentation, and oral presentation skills.
- **4. Leadership**: Provide biostatistical leadership in the design, conduct, analysis, and reporting of collaborative research studies.
- **Teaching**: Educate health professionals, research scientists, and students using effective didactic and instructive methodologies to relay complicated mathematical and statistical analyses.

Bioinformatics Concentration Competencies

- 1. <u>Computation</u>: Apply skills in software design and programming to create algorithms for biological data analyses.
- **2. Biology**: Apply knowledge of molecular biology, genomics, genetics, evolution, and systems biology through statistics and computation to address novel research questions.
- 3. Statistics: Create modeling and data analyses using statistical and mathematical applications.
- **4.** Conceptual Integration and Application in Bioinformatics: Develop project management skills and critical thinking and apply integrated concepts and data across fields of computer science, statistics, data science, biology, and health sciences through bioinformatics.

5. <u>Independent Research</u>: Plan and conduct original, independent research through application and integration of skills and knowledge developed through the preliminary phase of the PhD program.

Admission Requirements

Applicants must hold an undergraduate degree from an accredited institution of higher learning exhibiting a strong background in mathematics. Normally, a B average (or equivalent) from an accredited college is required. With evidence of special promise, such as high Graduate Record Examination (GRE) scores, an applicant whose academic record falls short of a B average may be accepted on a conditional basis. All applicants for the biostatistics track are required to submit current GRE scores (within 5 years of matriculation date). GRE scores are optional for the bioinformatics track, but strongly encouraged. Meeting the minimum requirements does not assure acceptance. The department may set higher admission standards and financial support packages available for new students limits the number of applicants accepted. Applicants must provide evidence of the completion of their undergraduate and/or graduate work before registration in the Milken Institute School of Public Health (GWSPH) is permitted. Graduate courses taken prior to admission while in non-degree status may not be transferable into GWSPH programs. The PhD program is designed to serve students coming directly from an undergraduate degree or from a Master's degree program. Students completing a master's degree prior to admission to the PhD degree program may transfer up to 24 credits towards the PhD coursework requirements. External credits must have been earned from an accredited institution in the last 6 years with a minimum grade of 3.0 (B) in each course. In this case, 48 hours of additional coursework and dissertation research will be required, including the instructional opportunities.

Concentration-Specific Requirements/Pre-requisites

Biostatistics Concentration	Bioinformatics Concentration	
Three semesters of calculus (through	A course in statistics	
multivariable calculus)	A course in introductory biology and/or a	
A course in linear algebra	course in computer programming	
A course in undergraduate statistics	Typically, an undergraduate major in either	
Additional advanced courses in mathematics and	biology, statistics, mathematics, computer	
calculus-based probability are encouraged but not	science, bioinformatics, and/or	
a requirement for admission.	bioengineering	

<u>All applications are submitted through SOPHAS.org</u>. Information about GWSPH Admissions and policies are available online at http://publichealth.gwu.edu/admissions.

Qualifying Exam

Biostatistics Concentration:

The Qualifying Examination is given over a two-week period in the summer before the third (fourth) year of the program for full-time (part-time) students, with a theory examination in the first week and an applications examination in the second week. The theory examination (5 hours, in-class, open-book) covers material in the areas of statistical inference, linear model, and generalized linear model. The applications examination (4 days, take-home, open-book) focuses on applied problems requiring statistical inference based on data analysis. See the HDS PhD (Biostatistics) Qualifying Exam Guidelines for details. The essential skills for this examination are generally developed through coursework in the first two years of the program. A student who fails to pass the comprehensive examination may, with the approval of the program director, repeat the examination the following year. Failure on the second attempt will result in termination from the PhD program.

Bioinformatics Concentration: The Qualifying Examination is given by the end of the second semester of the second year of the PhD program (can be earlier for those coming in with a Master's degree and/or equivalent work experience) and consists of a written and oral component.

The written component is an <u>NIH F31</u> award application focused on the student's current concept of a research project. The written component is developed in coordination with the dissertation advisor.

With advisor approval, the student schedules the oral exam component and delivers the written component to the advisory committee at least one week before the oral examination meeting. The oral exam covers concepts presented in the written component and addresses coursework concepts acquired through the graduate program.

Upon successful completion of the required course work and the PhD Qualifying Examination the candidate advances to PhD Candidacy: the dissertation research.

Program Requirements

Biostatistics Concentration

The curriculum includes parallel development of theory and applications as well as coverage of specific biostatistical topic areas and ethical issues in the conduct of biostatistical and medical research. The program requires a total of 72 credit hours of coursework and research with a minimum of 12 credits of dissertation research.

Course Distribution Summary	Credits
Required Core Courses	11
Required Concentration Courses	28
Electives	12 Minimum
Bioinformatics (at least 3 credits)	
Cognate Area (at least 3 credits)	
 Additional Electives (at least 3 credits) 	
Dissertation Research	12-24
Note: Research may be taken in 1 credit increments, but a minimum total of 12	
credits are required and a maximum of 24 credits can be taken.	
Total credits	72

Bioinformatics Concentration

The curriculum includes broad training across core areas of bioinformatics, including statistics, biology, computer science, and ethical issues in the conduct of biomedical research. The program requires a total of 72 credit hours of coursework and research with a minimum of 12 credits of dissertation research.

Course Distribution Summary	Credits
Required Core Courses	12
Required Concentration Courses	5
Electives	18 Minimum
Biostatistics (at least 3 credits)	
Cognate Area (at least 3 credits)	
Additional Electives (at least 12 credits)	
Dissertation Research	12-24
Note: Research may be taken in 1 credit increments, but a minimum total of 12	
credits are required with a maximum of 24 credits can be taken.	
Total credits	72

[^] Students without a prior degree from a CEPH-accredited program or school of public health are required to successfully complete the zero-credit, online course Pathways to Public Health (PUBH 6080) within one year of matriculation. There is no fee for this course.

^{*}Other courses can be taken as electives with the program directors' approval. 8/15/2025

Graduation Requirements

- 1. Credits: Successful completion of 72 credits.
- 2. **Curriculum:** Successful completion of the course requirements.
- 3. Qualifying Exam: Successful completion of all parts of the qualifying examination.
- 4. **Dissertation Proposal:** After successful completion of the Qualifying Exam, students should develop and present their dissertation proposal to their dissertation committee. This is typically done in the semester following the Qualifying Exam.
- 5. **Dissertation:** a minimum of 12 credits of dissertation research are required. The oral defense may be scheduled once the proposal has been successfully defended and the dissertation research credit requirement has been met.
- 6. **Grade Point Average:** A minimum program grade-point average of B (3.0).
- 7. **Time Limit:** The degree must be completed within seven years of matriculation.
- 8. **CITI Training:** All students complete training regarding human subject protection regulation and the Health Insurance Portability and Accountability Act of 1996 (HIPAA). To fulfill this requirement, you must complete the Collaborative IRB Training Initiative (CITI) Course in The Protection of Human Research Subjects.
- 9. **Academic Integrity:** All students are required to review the George Washington University Code of Academic Integrity, take the quiz within their first semester of study, and ensure documentation is submitted to the SPH Office of Student Records.
- 10. Professional Enhancement: Students must participate in 8 hours per degree program of advisor preapproved Public Health-related lectures, seminars, and symposia, related to the appropriate field of study specifically focused on research and research ethics. Students submit documentation of Professional Enhancement activities to the SPH Office of Student Records. Instructions can be found here: https://publichealth.gwu.edu/academics/forms
