Program Directors

Kate Applebaum, ScD, MSPH
Department of Environmental and Occupational Health
950 New Hampshire Avenue, NW
4th Floor
Washington, DC 20052
Tel: 202-994-8043
Email: kapplebaum@gwu.edu

Lance Price, PhD
Department of Environmental and Occupational Health
Science & Engineering Hall
800 22nd St, NW
7th Floor
Washington, DC 20052
Tel: 202-994-5482
Email: lprice@gwu.edu

Mission

The mission of the Environmental Health Ph.D. program is to educate individuals focused on developing new knowledge in the methods or applications of environmental health sciences that translates to environmental public health policy and practice. Our scholars will advance knowledge in analysis and laboratory sciences.

Goals

The goals of the Environmental Health PhD program are to ensure that graduates:

1. Demonstrate skills across a wide range of epidemiologic and biostatistical theories and methods;
2. Utilize knowledge in environmental public health risk sciences;
3. Understand general and specialized concepts and methodologies for scientific research in environmental health;
4. Understand and identify data that scientifically addresses environmental health disparity issues related to environmental justice, occupational exposures and global inequities in exposures and susceptibilities;
5. Demonstrate ability to work in interprofessional settings, e.g., in collaboration with quantitative, environmental, physical, and social scientists;
6. Understand and abide by guidelines for ethical research practice and responsible conduct of research;
7. Understand how to identify and appropriately work with communities from which research subjects are drawn and/or those who are most impacted by the conduct and results of the research;
8. Conduct independent research, analyze data, and communicate results;
9. Disseminate research findings to scientific and lay audiences.

Admissions Requirements

The Doctor of Philosophy Program is intended for professionals seeking to become public health researchers. Applicants who have completed an MPH degree from a Council of Education for Public Health (CEPH) accredited Program, or who hold a master’s degree in a related field will be considered for admission to the PhD Program. Applicants may indicate their relevant training, work and/or research experience, or educational background that may have prepared them for doctoral level training in Public Health. As an accredited School of Public Health, the curriculum in all graduate academic programs must provide a foundation in public health. All graduate students without a prior Public Health degree from an accredited school of public health will be required to successfully pass the zero-credit, free, online Pathways to Public Health (PUBH 6080) course within one year of matriculation. For the PhD, qualified applicants with degrees from institutions in foreign countries are also eligible for admission. All applicants must submit scores from the Graduate Record Exam (GRE) taken within five years of the date of
application. Because admission to this program is highly selective, successful applicants should have competitive academic credentials and substantial prior public health professional work experience related to the specialty field to which they are applying.

**Program Requirements**

Students will complete this 48-credit program by taking Foundational Courses, Core Courses, Tailoring Courses, and credit hours focused on Proposal Writing and Dissertation Research. Students will also need to demonstrate advanced knowledge in the field by passing the comprehensive examination. The dissertation must be an original research project.

**Competencies**

Upon completion of the PhD in Environmental Health students will be able to:

- Plan and design assessments of environmental and/or occupational exposure prioritizing fate and transport phenomena
  - Courses: PubH 8126, PubH 8411, PubH 8144

- Examine biological mechanisms involved in responding to environmental agents and factors that affect susceptibility to adverse effects
  - Courses: PubH 8123, PubH 6121

- Critique epidemiologic research investigating the relationship between environmental or occupational exposures and health, including summarizing methods and results and assessing biases
  - Course: PubH 6121

- Apply principles of risk science and risk frameworks to environmental health issues, including recognizing strengths and weaknesses of risk management decision-making
  - Course: PubH 8411

- Generate computational models applied to environmental and/or occupational health issues
  - Course: PubH 8144

### Environmental Health

- PUBH 8116: Communicating Research Results 2 credits
- PUBH 8199*: TOPICS: Epidemiology Methods in Environmental Health Research 3 credits
- PUBH 8110: Research Rotation (students can do up to 3 rotations, each rotation is 2 credits) 2 credits
- PUBH 6128: Global Environmental and Occupational Health 2 credits
- PUBH 6130: Sustainable Energy and the Environment 2 credits
- PUBH 6133: Social Dimensions of Climate Change and Health 3 credits
- PUBH 6135: Researching Climate Change and Health 3 credits
- PUBH 6140: Global Climate Change and Air Pollution 2 credits

### Microbiology and Molecular Studies

- PUBH 6127: Germs: Introduction to Environmental Health Microbiology 2 credits
- PUBH 6146: Microbiomes and Microbial Ecology in Public Health 2 credits
- PUBH 6238: Molecular Epidemiology 1 credit
- BMSC 8230: Molecular Basis of Human Disease 3 credits
- PUBH 6885: Computational Biology 3 credits
- PUBH 8878: Statistical Genetics 3 credits

### Epidemiology

- PUBH 6252: Epi Methods II: Advanced Epidemiologic Methods 3 credits
- PUBH 8419: Measurement in Public Health and Health Services 3 credits
**Pathways to Public Health course (PUBH 6080).** As an accredited School of Public Health, curriculum in all graduate academic programs must provide a foundation in public health. If a student already holds a Public Health degree from an accredited program or school of Public Health, this course will be waived. Otherwise, this zero-credit, free, online course should be completed within one year of matriculation.

**Tailoring courses.** Different tailoring courses may be considered. Discuss planned order of courses and selection of tailoring courses with advisors.

**Total credit hours.** The total credit hours earned toward the PhD is 48 credits. Students may take a minimum of 12 credit hours of Tailoring credits and then 14 credit hours in proposal writing and dissertation research (this includes the 2 credit hours of proposal writing). This may vary up to a maximum of 18 credit hours in Tailoring credits and then 8 credit hours in proposal and dissertation research.

**Graduate Teaching Assistant Certification (UNIV 0250).** Students should serve as a Teaching Assistant (TA) for at least one course. Prior to taking on the role of TA, students are required to successfully complete GW’s certification. This 1-credit certification is paid for by GW and would not count toward the PhD degree program requirements.
Graduation Requirements

1. **Integrity Quiz & Plagiarism.** In the first semester as a PhD student, all students should review the George Washington University’s Code of Academic Integrity, take the quiz and submit documentation to the School of Public Health’s Office of Student Records.

2. **CITI Training requirement.** All students are required to complete training regarding human subject protection regulation and the Health Insurance Portability and Accountability Act of 1996 (HIPAA). To fulfill this requirement, you must complete the Collaborative IRB Training Initiative (CITI) Course in The Protection of Human Research Subjects.

3. **Credits.** Successful completion of required foundational, core, and tailoring course credits.

4. **Grade point average.** A minimum overall grade point average of 3.0.

5. **Comprehensive examination.** After completion of course requirements, students will take a comprehensive exam based on the core courses, typically at the end of the second year. Upon successful completion of the exam, students officially enter the doctoral candidacy phase of the program.

6. **Proposal defense.** Doctoral candidates prepare a written dissertation research proposal with guidance from their dissertation advisor and committee. Each doctoral candidate gives an oral presentation and defense to the committee who determines the student’s readiness to commence the dissertation.

7. **Dissertation.** Doctoral candidates are required to conduct original research on a contemporary public health problem or issue. The dissertation will consist of 3 academic manuscripts and the student gives an oral defense to the dissertation committee. One manuscript must be submitted to a peer-review journal prior to graduating.

8. **Professional enhancement.** Students must complete 8 hours of professional enhancement activities. This can be accomplished through participation in seminars, workshops, professional meetings and other appropriate functions. Students should seek prior approval from their academic advisor to make sure it will meet the requirement and obtain proof of attendance. Documentation of attendance to the event should be submitted to the School of Public Health’s Office of Student Records.

9. **Timeline.** The degree must be completed within seven years of matriculation. Degrees are awarded each semester, though formal commencement ceremonies, including the doctoral hooding ceremony, only occur in May. Students are eligible to participate in graduation activities only after they have completed all degree requirements and have no financial obligations to the University.
